

As a presbyopic optometrist, I have had the opportunity to try nearly all of the new PAL lens designs. The new KODAK Precise Lens allows me to move from examination room to examination room without any of the distance vision peripheral distortion that I have experience with other lenses. When reading the journal in the evening, I find that there is less head movement necessary while trying to read across the entire page. This lens opens up a new market for me when addressing the visual needs of emmetropic presbyopes. I now will have the confidence to prescribe PALs rather than single vision reading glasses.

Dr. Kirk L Smick
Clayton Eye Center
Marrow, Georgia

My new KODAK Precise Lenses felt great the moment that I put them on. What impressed me the most was the greater field of vision for my reading. This was significantly better than any other progressive that I have worn and I wear a +2.50 add. Lastly, I have noted much less swimming and distortion in my peripheral vision. Thank you for these lenses. They will make a dramatic difference for my patients.

Dr. Lorne Muth
20/20 Vision Associates
Riverside, California

Patients who have complained about peripheral distortions with their progressive lenses in the past love the new KODAK Precise Lens design. This design has let my patients who previously could not adapt to progressives finally enjoy the lens benefits.

Dr. Wellington Bentley
Barrie, Ontario

The new KODAK Precise Lens is a welcome new progressive lens. There seems to be no distortion as opposed to other no-line bifocals. In the past, the main reason people rejected progressive lenses was the distortion they experienced in different areas of the lenses. This is a much better lens in that sense and people are going to find this lens much easier to adapt to than the previous generation of progressive lenses. I have been personally wearing the Precise Lens and find it to be an exceptional lens with little or no "swim". I am excited and looking forward to changing my patients to this lens, especially those who have experienced adaptation problems in the past.

Dr. Merle Berry
Albany Eye Care
Albany, Oregon

The first thing I noticed with my KODAK Precise Progressives was the lack of distortion in the peripheral region of each lens and the smooth transition from distance, intermediate, and near. I didn't seem to lose the width of clarity in the intermediate and near zones! And I experienced a much quicker adaptation time than with my previous progressives.

My patients are describing much the same success with their Precise Lenses. And I'm hearing it from patients who were already in progressives and from brand new presbyopes, too.

I think SA's KODAK Precise Lens has successfully addressed the shortcomings of many progressive designs. Patients can expect a higher level of satisfaction from this lens, right from the very beginning.

Dr. Danny Malone
Vision Source
Plano, TX

A patient called in with an unsolicited testimonial that the KODAK Precise Progressive was the only one she could get used to. She previously had tried the KODAK Concise and then the Shamir Genesis in the same frame as the Precise.

Cathy Lambert, one of the Optometric Technicians in our office has tried the Varilux Comfort, AO Compact, Shamir Piccolo and the only lens that she could wear without getting a swimming sensation was the KODAK Precise.

Another technician, Michele Burdett, fit her father in the KODAK Precise Lens. He stated that it was the easiest lens to get used to. He didn't have to work to adapt to Precise. It gave him wider side vision in the distance portion of the lens. His previous lens had been Varilux Comfort and Rodenstock LifeC.

In our practice we have found the KODAK Precise Lens easy to fit and easy for patients to adapt to. This made me think of the "PhD" cameras that are very sophisticated but easy to use. All you have to do is "Push Here Dummy" and the camera does the rest. In fitting the Precise Lens, all you have to do is measure the monocular PD, Height, and Dispense. The PhD Precise Lens does the rest! It makes me a very smart doctor.

Dr. Robert Peterson
McHenry, IL

One of my patients loved the KODAK Precise Progressive performance so that much he bought three pair. He reports; "I love these lenses, they feel like single vision."

Dr. Paul DiFiore
Optique Boutique
Mt. Laurel, New Jersey

WOW !!! The designers at Signet Armorlite should get BIG kudos. I have received a tremendous amount of positive feedback from patients, but it wasn't until I wore the lens myself that I really appreciated how good it was. The seamless clarity at all distances is like no other progressive I have worn. You have hit the JACKPOT with the new KODAK PRECISE !! Feel free to have any ECP call me as they will here my wholehearted endorsement.

Dr. Peter Liane
Liane Downtown Eye Associates
Jacksonville, FL

The KODAK Precise Lens provides a wider field of vision for my patients at intermediate and near areas without compromising distance acuity. This lens rivals any "computer" lens currently on the market and makes an excellent addition to an already comprehensive family of products available from Signet Armorlite.

Dr. Doug Schroeder
Sunset Eye Center
St. Louis, Mo

I have had my KODAK Precise Lenses about a week. I decided to give Signet Armorlite a real challenge by choosing a really narrow frame. I believe that they are one of the best progressives I have worn. The reading area is very clear. I feel that I get the full benefit of the bifocal with no distortion.

Mr. Billy Landers
Future Optics
Jackson, Tennessee

I know my Rx is not the easiest to generate (high minus) but the lenses are great. Very sharp vision from distance to near with minimal peripheral distortion.

Dr. Ross H. Williams
Flint, Michigan

Just a note...I have had my very own Kodak Precise progressives for about 3 days. It is the BEST progressive I've ever worn!! Very wide, very comfortable and almost no distance distortion! I love it!

Dr. Burt Dubow
Minnesota

“You visited our office and gave me a certificate for the KODAK Precise PAL. I just got them and, I tell you, this is the most amazing pair of glasses I've ever had. I absolutely forgot I had them on. I'm really impressed, and I told my staff so, so I think you are going to see a jump in sales from our office.....The PAL is amazing. I can't imagine anybody not adapting to this. I just can't see any distortion at all. It's really remarkable.”

Dr. Ann Berk,
Sunnyside Vision Source
Clackamas, Oregon

“Thank you for investing time and technology in perfecting progressives for all of mankind!”

Giovanni Fiol, optician
Dr. Mark Sawusch

Giovanni also sold a pair of KODAK Precise to Bonnie Rait and she loved them too!
